Merchant Application an... | 7			
Onboarding applications are submitted via different channels	To create one centralized digital application	Process: No standard intake as informations are re-entered manually across different tools.	To build one unified application portal with clear requirement listed
		Information: Requirements are not shared proactively. merchants find out what's missing documents at a later stage and this probably causes delay	To publish a complete document checklist and estimated timeline at the point of apllication

Status tracking and visib... | 4			
Merchants do have to call or send email to ask for updates as they could not see their application status themselves	A simple 24/7 merchant dashboard will be built to show real-time status and estimated completion date	Technology: Enquiries pile up on the customer support team as no self-service visibility layer exist	To build a basic merchant portal where status updates are always visible
Settlement and Payment... | 4			
Fund settlement dates, cut=off rules and processing times are not visibly clear and every merchant has to ask individually	settlement schedule, cut-off times and fund estimated arrival will be clearly visible inside the new merchant dashboard	Information: Staff do not have enough product knowledge on settlement and this creates uncertainty and anxiety for merchant	To document all settlement details with finance and display them on the intranet and on the information session of the new merchant dashboard
